EXPERIENCE

Recovery Database Network (RDN) - OPENLANE Remote
Junior Software Engineer *September 2025 - Current*

- Built and shipped a new React-based web service serving 3 frontend applications and 1,000+ daily users, driving integration across Go middleware and backend APIs with end-to-end test coverage
- Resolved 75+ production incidents across frontend, Go middleware, backend, and Firebase, diagnosing root causes from Grafana logs and metrics and eliminating recurring failure modes
- Ship features across 20+ services and repositories backing two client-facing products, spanning Angular, Flutter/Dart, React, Go middleware, and Firebase
- Author technical specifications across engineering teams and the unit and end-to-end suites that cover them, from implementation through production support

Wovyn Mountain View, CA
Co-Founder & Technical Lead *August 2025 - Current*

- Architected and shipped a full-stack Flutter and Firebase mobile application, designing a modular architecture separating data, business logic, and UI layers
- Designed an 8-factor weighted feed ranking model based on user behavior, content quality, engagement signals, and time decay, with post-processing to improve content diversity
- Built a Firebase-backed backend with 20+ Cloud Functions supporting recommendations, scheduled jobs, notifications, and user workflows, plus an app-side state and caching layer that cut redundant backend calls
- Shipped a TestFlight beta to 30+ users

Planter Remote
Software Engineer Intern -> Software Engineer *May 2024 – September 2025*

- Enhanced personalization for 100k+ monthly users by developing core product features
- Led backend modernization by migrating key data from Firebase Realtime Database to Firestore, improving scalability, performance, and support for new feature development
- Designed Firestore collection schemas; authored Python scripts to restructure existing data, ensuring data integrity and optimized app performance
- Continued contributing as a part-time developer after the internship, supporting ongoing feature development and maintenance

University of Illinois at Urbana-Champaign Champaign, IL
CS222 (Software Design Lab) Course Assistant *January 2023 – May 2024*

- Mentored student groups working on full-stack projects, guiding project planning, team workflows, and reviewing GitHub pull requests for code quality and individual contributions
- Assessed technical assignments and offered 1-on-1 support to debug code issues and deepen understanding of core concepts

Vitesco Technologies Chicago, IL
Software Engineer Intern *May 2023 – August 2023*

- Improved team's CI/CD testing pipeline by debugging existing scripts and implementing 27 new YAML jobs and 2 new PowerShell scripts, streamlining software updates and variant testing for high-priority clients
- Wrote custom C++ unit tests to achieve 100% Modified Condition/Decision Coverage ensuring compliance with company standards, and presented technical findings to 50+ engineers and Vitesco leadership
- Delivered calibrated reports for 4 client-specific software variants, meeting precise technical and customer requirements

EDUCATION & HONORS

University of Illinois at Urbana-Champaign, **College of Liberal Arts & Sciences** Champaign, IL
Bachelor of Science in Computer Science & Linguistics May 2025
Honors & Awards: Dean's List

SKILLS

Languages & Frameworks: Python, JavaScript/TypeScript, React, Angular, Node.js, Flutter, Dart, HTML/CSS, SQL, Go, C/C++
Databases & Cloud: MySQL, Firebase (Firestore, Authentication, Cloud Functions, Storage), MongoDB, Redis, AWS (S3)
